Billing App can efficiently monitor the calls and keep records of each call received/transferred by S-Series VoIP PBX. Use Billing App to allocate call credit and top up extensions, and conduct call analysis on the basis of statistics. Both prepaid and postpaid are supported. Flexible rate settings and detailed records make it extremely easy for enterprise to monitor charges, spot misuse, and enhance efficiency.

Call Credit Management

Extension level or account level credits can be assigned. Users could choose to charge the call cost from the extension level or the account level.

- **Extension level:** call credits are assigned to specific extensions.
- **Account level:** call credits are assigned to pre-configured accounts and shared by users who know the password (PIN code).

Prepaid and Postpaid Billing

Prepaid and postpaid modes provide real-time billing and can be used for various services and requirements.

- **Prepaid mode:** assign call credit to the account/account first, and the call fees are deducted from the credit right after the call ends. Once the user has reached the credit limit, the system will automatically restrict the extension/account from dialing out.
- **Postpaid mode:** call fees are deducted from the credit right after the call ends. When the credit runs out, the system will automatically restrict the extension/account from dialing out.

Flexible Rating

Rate can be set according to extensions/accounts, time periods, call duration, call types (local or international, from landline or mobile phone).

Real-time Billing

The immediate real-time billing empowers the user by making rating, refilling and management responsive, interactive and flexible.

Detailed Statistics

Provides call detail reports (display usage by time frames, extension/account, and trunks) for management and traffic analysis.
