

Built-in Unified Communications Application

InUC

Built-in video collaboration, screen sharing, presence, IM & more

In today's working environment, employees are spread across different locations. InUC is a unified communications application providing video conferencing, screen sharing, presence and instant messaging for any business of up to 255 users. Utilizing WebRTC (Real-Time Communications), InUC provides highly cost-effective video and collaboration working seamlessly within your IT environment.

Users are able to quickly set-up video connections between two or more PCs or devices from anywhere with an internet and VPN or LAN connection. In addition, users can work collectively with screen share and shared documents. Also ideal for live demos and presentation slideshows.

Business Benefits

- > Increase your productivity levels: Time-saving features for all your work force
- > Web video conference: Enabling travel saving, mobility, home working & multi-site organizations
- > Screen sharing: Provides collaboration on documents with multiple users
- > Lower costs: Single initial cost, no recurring monthly subscriptions
- > Easy to use: Minimal / no training required
- > Easy contact management: Contacts are auto-populated from email application
- > Presence: Provides overall view of your team's availability making users become more reachable

At a Glance

- > Built-in UC application
- > Video conferencing, screen sharing, IM & Presence
- > Easy to use interface
